2023 – 2025

Master's Degree in Law at eCampus University
2025 – Current

Software IT Internship
2025

ABOUT ME

My educational and professional background began at Future Touch Srl, an ICT company based in Rome, specialized in the TLC and Telecommunications sector, registered with ROC no. 29660, as well as Cloud Computing, Cyber Security, Software Engineering, Digital Forensics, and GDPR Privacy. The company operates at a national level through certified partners.

During my professional experience, after strengthening my expertise in Cyber Security, I obtained the CSTMIC (Counter Surveillance Technical Master International Certification), positioning myself as a consultant for companies and self-employed professionals. I support the implementation of reliable, certified, and robust technological solutions for data and systems protection, with the aim of building a solid foundational security structure to prevent and respond to potential cyberattacks.

Subsequently, I decided to further specialize my training by integrating the technical and scientific IT field with law and psychology, in order to develop a multidisciplinary approach to security and risk analysis.

EDITORIAL PUBLICATIONS

"Crimine Digitale, Investigazioni 2.0"
ISBN 9798278328407

Digital Kindle & Printed Book on Amazon

I successfully obtained a Bachelor's Degree in Legal Services (Criminology), with a particular focus on the study of behavioral analysis applied to emerging forms of digital crime.

As of today, my professional path aims to integrate Digital & Mobile Forensics—namely the acquisition and extraction of digital evidence—with law, psychology, and traditional forensic sciences.

My work is addressed to institutions, companies, and private individuals, focusing on the collection and analysis of data from electronic devices such as smartphones, tablets, PCs, and audio/video storage devices, in full compliance with Italian Law no. 48/2008 and international standards ISO/IEC 27047:2012 and ISO/IEC 27042:2015.

This field, often underestimated, now affects all of us within the new digital reality in which we are immersed. I explore this topic in depth in my book Digital Crime: Investigations 2.0 (ISBN 9798278328407).

The book is a journey into the discovery of new forms of crime and a reality very different from the one commonly portrayed on television. It examines crime in its continuous evolution, where criminology and criminalistics merge in the search for objective scientific truth, guiding the reader into the mind of the Criminal 2.0.
